5] Use De Moivre theorem to obtain $\cos 3\theta$ & $\frac{\sin 3\theta}{\sin \theta}$ in terms of power of $\cos \theta$.

De Moivre theorem

$$(\cos \theta + i \sin \theta)^n = (\cos n\theta + i \sin n\theta)$$

at $n=3$

$$(\cos \theta + i \sin \theta)^3 = (\cos 3\theta + i \sin 3\theta)$$

$$= (\cos \theta)^3 + 3(\cos \theta)^2(i \sin \theta) + 3(\cos \theta)(i \sin \theta)^2 + (i \sin \theta)^3$$

$$= \cos^3 \theta + 3i \cos^2 \theta \sin \theta + -3 \cos \theta \sin^2 \theta - i \sin^3 \theta$$

Real Part = $\cos 3\theta + i \sin 3\theta$

$$\cos 3\theta = \cos^3 \theta - 3 \cos \theta \sin^2 \theta$$

$$\cos 3\theta = \cos^3 \theta - 3 \cos \theta \cdot [1 - \cos^2 \theta]$$

Im Part

$$\sin 3\theta = 3 \cos^2 \theta \sin \theta - \sin^3 \theta$$

$$\frac{\sin 3\theta}{\sin \theta} = 3 \cos^2 \theta - (1 - \cos^2 \theta)$$
